

MS700 Triangular Mast

The MS700 is a 700mm wide, triangular, guyed mast system with tubular legs and angle bracing.

Suitable for heights up to 100m, depending on location and loading, this system is primarily used for light antenna loading or as a radiating antenna for AM broadcast applications.

Accessories

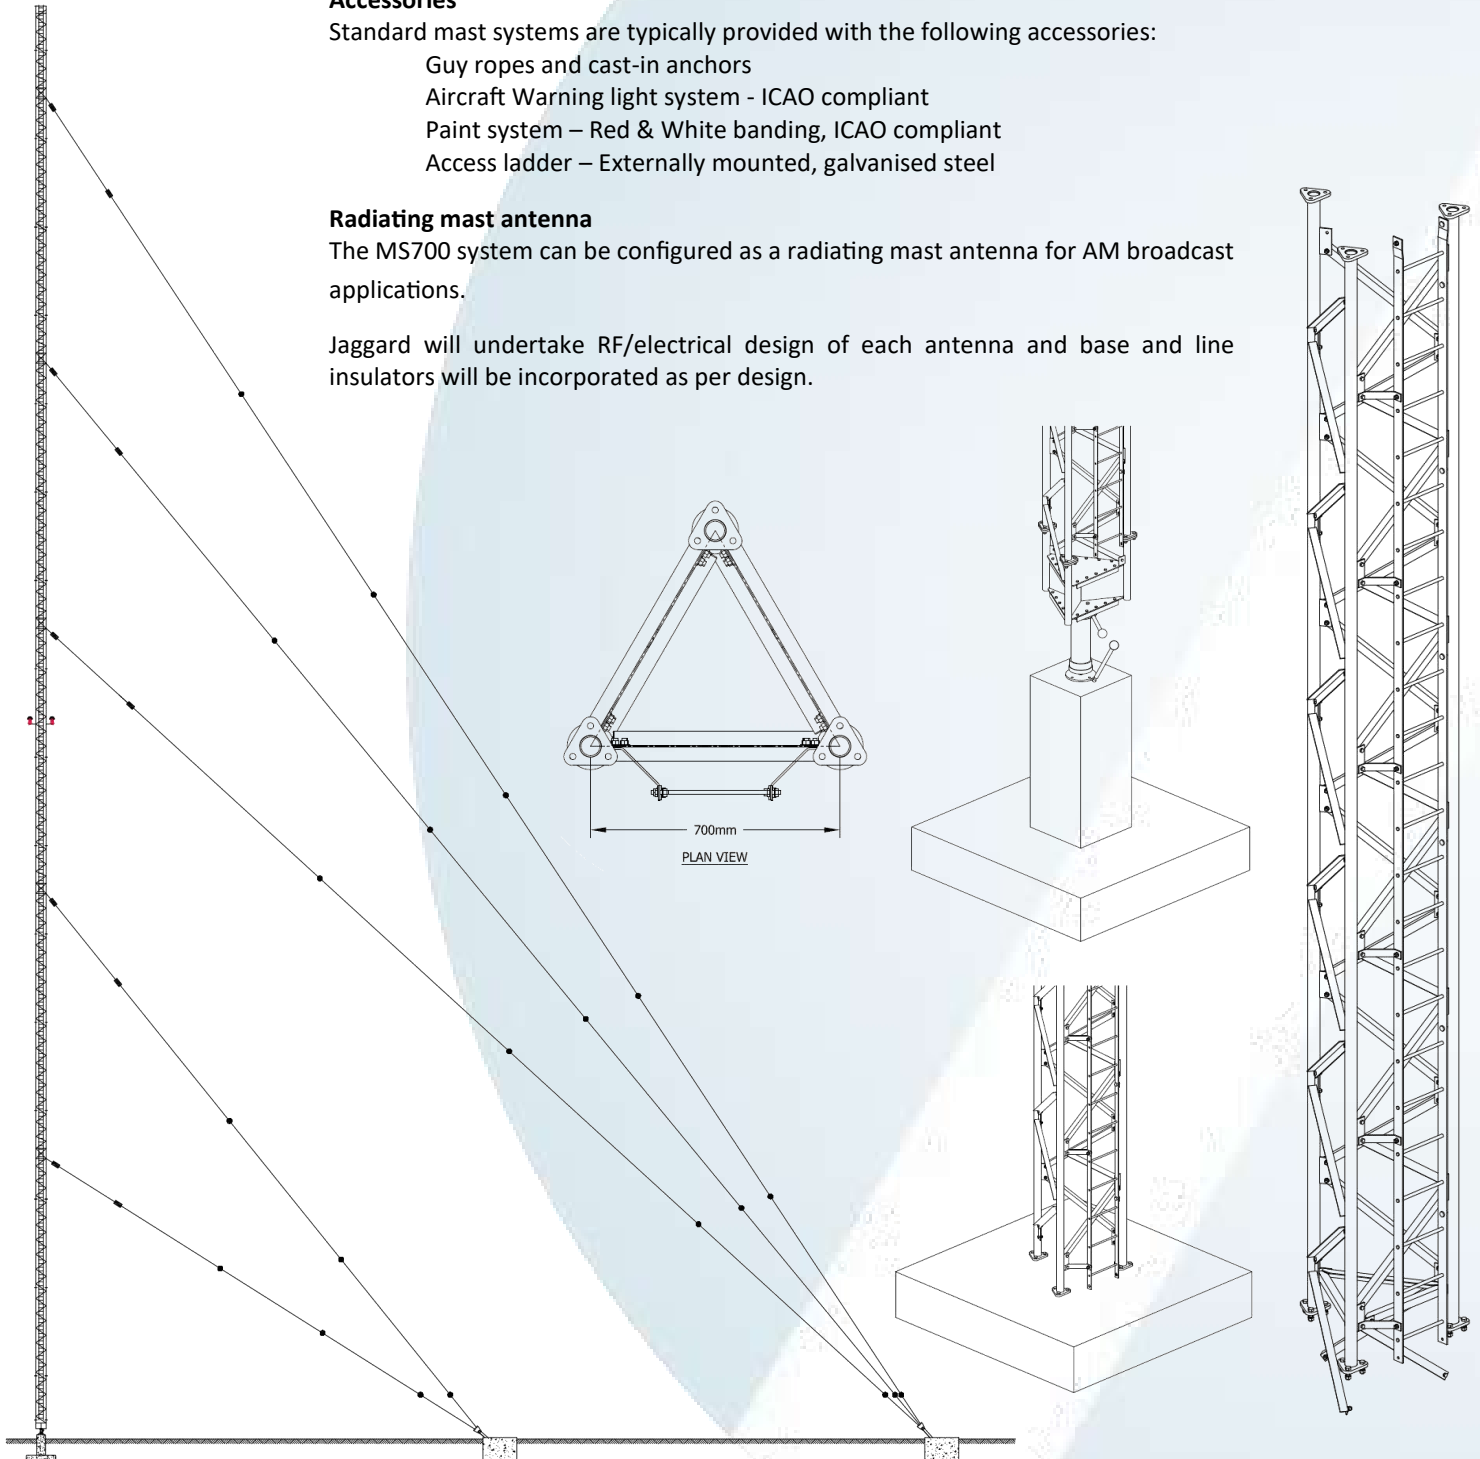

Standard mast systems are typically provided with the following accessories:

- Guy ropes and cast-in anchors
- Aircraft Warning light system - ICAO compliant
- Paint system – Red & White banding, ICAO compliant
- Access ladder – Externally mounted, galvanised steel

Radiating mast antenna

The MS700 system can be configured as a radiating mast antenna for AM broadcast applications.

Jaggard will undertake RF/electrical design of each antenna and base and line insulators will be incorporated as per design.
